

AMENDMENTS TO THE ABSTRACT

Kindly replace the original Abstract with the enclosed Abstract.

ABSTRACT OF THE DISCLOSURE(clean copy)

A recording/reproduction device receives content broadcast from a content provision device. The recording/reproduction device encrypts the received content using a device key, to generate first encrypted content. The recording/reproduction device decrypts the first encrypted content to obtain the content, performs an image conversion on the obtained content to generate converted content, and encrypts the converted content using a medium key to generate second encrypted content. The recording/reproduction device writes the second encrypted content, the medium key, and the device key to a portable medium. When the portable medium is inserted in a mobile information terminal, the mobile information terminal decrypts the second encrypted content using the medium key to obtain the converted content, and reproduces the converted content.
